

## INSTANT SHINE

‘Instant Shine’ is specifically designed for use on road vehicles to offer protection against common traffic soiling including exhaust fumes, corrosive particulates, oils, lubes. Also, offers protection to damage from other sources such as bird faeces, tree sap and UV light.

The product contains a specialised blend of cleaners and amino functional silicones and silicone resins that chemically bond to a painted surface. These polymers cross-link together within a few hours of application and form a tough and durable barrier.

Polishing with a microfibre cloth after application brings out the original paint colour and produces an ‘as new’ shine.

Features	Benefits
Includes a barrier chemistry Non powdery formulation Non-hazardous formulation Non viscous formulation for easy application Spray on, wipe off	Water Repellent Oil Repellent Offers UV protection Salt resistant Easier tar removal Easier insect removal Durable results Disguises microscopic scratches and scuffs ‘as new’ gloss finish Easy to buff with minimal effort

Advantages	Why
Water Saving Cost and energy saving Less time out of use Improved ‘brand image’	Reduces frequency of cleaning Less chemical usage, reduced labour Important if a service vehicle Vehicles remain cleaner for longer
